

CHARAN R

DevOps Engineer | Linux | Docker | Jenkins | Kubernetes | Terraform | Ansible | AWS

Bengaluru, Karnataka | +91 7760707949 | charanbavaji.official@gmail.com | [LinkedIn](#) | [GitHub](#) | [charan.cloud](#)

PROFESSIONAL SUMMARY

DevOps Engineer with extensive hands-on expertise in, Docker, Jenkins, Kubernetes, Terraform, Ansible, and AWS (EC2, VPC, EKS, IAM) has independently built, deployed, and torn down real CI/CD pipelines and cloud infrastructure end-to-end.

TECHNICAL SKILLS

DevOps & Cloud: Linux Administration, Bash/Python Scripting, Docker & Docker Compose, Jenkins (Jenkinsfile, Multibranch Pipelines, Webhooks, RBAC), Kubernetes (Services, ConfigMaps/Secrets, PV/PVC), Terraform, Ansible (Dynamic Inventory, Roles), Git/GitHub, CI/CD Pipeline Design.

Cloud Platforms: AWS (EC2, VPC, IAM/IRSA, EKS, S3, ALB, NAT Gateway, Security Groups/NACLs), Google Cloud Platform (Compute Engine, Cloud Storage).

Monitoring & Observability: Prometheus, Grafana, AWS CloudWatch.

Development (Prior Experience): Python, React.js, JavaScript, Node.js, Express.js, MongoDB, JAVA, REST APIs.

WORK EXPERIENCE

Full Stack Developer | Uggiso International Pvt. Ltd.

Aug 2025 - Feb 2026

- Configured and managed GCP infrastructure (Compute Engine VM instances, Cloud Storage Buckets) for application hosting and asset delivery.
- Collaborated in an agile environment on sprint planning, code reviews, and CI workflows to ship production-ready builds.
- Built full-stack features with React.js and Node.js/Express.js REST APIs, working across the deployment lifecycle.

Full Stack Developer (MERN) | Ashva Health Tech Limited.

Apr 2025 - Aug 2025

- Maintained AWS-hosted servers via SSH (MobaXterm) and supported deployment of multiple internal admin dashboards.
- Implemented JWT-based authentication and role-based access control (RBAC) across dashboards used by internal stakeholders.
- Built RESTful APIs for CRUD workflows supporting service management, procurement, and admin operations.

PROJECTS

U2Collab — Jenkins CI/CD Pipeline

- Built an end-to-end Jenkins + Docker CI/CD pipeline for a real-time MERN app: webhook-triggered builds, multi-stage Docker images, DockerHub push, automated EC2 deployment, and email notifications on build status.
- Added a DevSecOps layer to the pipeline: SonarQube for static code analysis and code quality gates, and Trivy for scanning Docker images for vulnerabilities before push, failing the build on critical findings.
- Deployed the app on a production EKS cluster with managed nodes, IRSA-based IAM (no hardcoded AWS keys), and an internet-facing ALB doing path-based routing across two containerized services.
- Managed secrets outside the pipeline workspace (Kubernetes Secrets / isolated secrets path) instead of storing them in code or Jenkins job configs, reducing exposure risk.
- Provisioned the cluster with eksctl and fully tore it down afterward, verifying no orphaned NAT Gateway, EIP, EBS, or IAM/OIDC resources remained.

Cribl VPC Project — Terraform + Ansible

- Provisioned a multi-tier AWS VPC using Terraform: public/private subnets, NAT Gateway, bastion host, layered Security Groups + NACLs, an ALB with target group, and a second VPC connected via VPC Peering.
- Used Ansible with AWS dynamic inventory and SSH agent forwarding through the bastion to configure 3 EC2 instances running Cribl as a systemd service.
- Structured infrastructure into reusable Terraform modules (VPC, EC2, ALB, Peering, Route 53) wired together in a dev environment.

EDUCATION

Master of Computer Application (MCA) | 2023 – 2024

Jain University, Bengaluru | CGPA: 8.7 / 10

Bachelor of Computer Applications (BCA) | 2019 - 2022

The Oxford College of Science, Bengaluru | CGPA: 7.6 / 10

CERTIFICATIONS & TRAINING

ScoopLabs DevOps Engineering Program — Offline | May - Sept 2026

Covers: Linux & Shell Scripting, Git/GitHub, Docker, Jenkins CI/CD, Kubernetes, AWS (EC2, VPC, IAM, EKS), Terraform, Ansible, and CI/CD Pipeline Design.
